THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS** FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

Detailed Action

Response to Amendment

1. Applicant's arguments (see amendment filed on 12/19/2007) with respect to claims 21, 23-27, 31-33, 35-42 and 44 have been fully considered and are accepted. The rejection of claims 21, 22, 25, 27-30, 35-41 and 44 has been withdrawn. The Examiner acknowledges the cancellation of claims 23, 25, 35, 37-41 and 44, and the addition of new claims 45, 46 and 47. The objection to claims 33 and 34 is withdrawn. No outstanding issue remains.

Allowance

2. Claims 21, 22, 24, 26-34, 36, 42, 43 and 45-47. The following is an examiner's statement of reasons for allowance:

In reference to claims 21, 26, 27, 31, 32, 33, 42 and 45: *Folkesson et al.* (IEEE Article, 'Modeling of Dynamic Errors in Algorithmic A/D converters', hereon *Folkesson*) teaches a test device for testing circuits (such as A/D converter) (see *Folkesson*, page 455, Introduction). The test arrangement comprises: a precision signal generator, configured for generating a test signal and coupled to an input contact for coupling to an input of an integrated circuit (see *Folkesson*, page 457, section 5, 'Measurements and simulations'); a reference signal generator configured for generating a reference signal (see *Folkesson*, page 455, Fig. 1); and a comparator unit (see *Folkesson*, page 455, Fig. 2).

Fan et al. (U.S. Patent 6,703,885, hereon *Fan*) teaches a trimmer device where a reference signal of a target circuit (precision signal generator) is compared with a test signal, and

a binary count output is generated according to result of a comparison, the counter coupled to the switch device and operable so as to generate a binary count output that is used to selectively turn on or turn off the transistor units of the switch device (see Fan, column 2, lines 61-67).

Noda (U.S. Patent 5,870,042) teaches a test device comprises two reference signal generators where the first reference signal generator is configured for generating a lower reference signal (see Noda, Fig. 7, SP 11) and a second reference signal generator configured for generating an upper reference signal (see Fig. 7, SP 9), a first comparator unit, which is connectable to the first reference signal generator, a second comparator unit, which is connectable to the second reference signal generator (see Noda, Fig. 2 and column 3, lines 60-67). These are the states of the art.

The primary reason for the allowance of claim 21 the inclusion of the limitation: a test device having a reference signal generator which has “a calibration line and reference line, the comparator unit being connected to the calibration line and to the reference line of the reference signal generator, comparator unit having calibration unit, and the comparator unit also being operable in a calibration mode configured such that the switching properties of the comparator unit are adjustable by the calibration unit by means of the signal values of the calibration line which are present at the comparator unit and by means of the reference line.”

The primary reason for the allowance of claim 26 is the inclusion of the limitation: a test device having the “comparator having two inputs and an output, the first input of the comparator being coupled the reference line of the reference signal generator, the second input of the comparator being coupled to the calibration line of the reference signal generator and the connecting line of its input contact, the output of the comparator being coupled to the calibration

unit and to the precession signal generator and the switching properties of the calibration unit being adjustable by the comparator.”

The primary reason for the allowance of claim 27 is the inclusion of the limitation: a test device having “a decision logic unit [which] is coupled to the comparator unit and which is [also] configured such that control signals are generated for the precision signal generator from the output signals of the comparator unit.”

The primary reason for the allowance of claim 31 is the inclusion of the limitation: a test device having “a load board for receiving at least one needle card for testing integrated circuits and having at least one test receptacle for testing integrated circuits and for connecting a handler to a tester of integrated circuits, the load board having a test device.”

The primary reason for the allowance of claim 32 is the inclusion of the limitation: a test device having “...a precision signal generator and the reference signal generator being formed on the tester, and the comparator unit with the calibration unit being arranged on the load board, adjacent to the input contacts for the integrated circuit.”

The primary reason for the allowance of claim 33 is the inclusion of the limitation: “...providing a tester having a load board configured for receiving a plurality of needle cards for testing integrated circuit and for connecting a handler to a tester of integrated circuits and which is equipped with plurality of test receptacles for testing integrated circuitsand carrying out a test mode having [a] process ... generation of a test signal by a precision signal generator and application of the test signal to the integrated circuit; generation of at least one reference signal by the reference signal generator and application of the reference signal/reference signals to the comparator units; comparison of the test signal with respective reference signal by the

comparator units; [and] turning-off the precision signal generator by one of the comparator units if the test signal exceeds or falls below the reference signal.”

The primary reason for the allowance of claim 42 is the inclusion of the limitation: a test device having “... first and second signal generator each having a calibration line and a reference line, each comparator unit being connected to the calibration line and to the reference line of the relevant reference signal generator, each comparator unit having a calibration unit, and the comparator unit also being operable in calibration mode configured such that the switching properties of the comparator unit are adjustable by the calibration unit by means of the signal values of the calibration line which are present at the comparator unit and by means of the reference line.”

The primary reason for the allowance of claim 45 is the inclusion of the limitation: “...a precision signal generator, configured for generating a test signal and coupled to at least two input contacts for coupling to an input of an integrated circuitand at least on comparator unit for each input contact, the comparator unit being operable in a test mode and being configured such that the test signal is compared with the reference signal and the precision signal generator can be turned off by the comparator unit if the test signal exceeds or falls below the reference signal.”

It is these limitations, as recited in combination with the dependent claims 22, 24, 28-30, 34, 36, 43, 46 and 47 which are found in each of the claims but are not found, taught or suggested in the prior art of record, that makes the claims allowable over the prior art.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
